Tube Test Data For

CONAR

Tube Tester

Model 224

CONAR TUBE TESTER
CONDENSED OPERATING INSTRUCTIONS

1. Plug in the tester to a commercial 120 VAC line.

2. Locate the tube to be tested in the Tube Data Manual.

3. Set the A, B, and D controls as indicated.

4. Insert the tube into the proper socket.

5. Turn the Line Adjust control for a center-scale reading on the meter (Adjust Line).

6. Check filament (heater) continuity by moving the Lever switch listed under "C" in tube data to the TEST position. The lamp must light if the filament is good. If the lamp lights, place the Lever switch in the "C" (up) position and readjust the ADJUST LINE control.

7. Test for cathode shorts by placing the Lever switch(es) listed under CATH SHORTS to the TEST position. The lamp must NOT light. Return the switch(es) to the NORMAL position.

8. Test for element continuity by placing the Lever switches listed under CONT TEST (if any) one by one in the TEST position and then return the switches to the NORMAL position. The lamp should light for each switch designated.

9. Place each Lever switch indicated in the TEST column in the TEST position. The lamp must NOT light for any of these switches. Leave all switches in the TEST position.

10. If the tube passes all of the above tests, press the red pushbutton switch to read the relative condition of the tube on the meter.

11. Refer to the Operating Manual for more detailed instructions.
